Rotating Machinery: Proceedings Of The International Symposia On Transport Phenomena, Dynamics, and Design of (Proceedings of the international ... dynamics, and design of rotating machinery) J. H. Kim

This work (the second of two) contains papers presented at an international conference on the technology of rotating machinery, which specifically address dynamics in terms of rotors, discs and shafts, diagnostics and measurements, the effects of flow-induced forces and more. Rotating machinery is the prime mechanism for transporting heat, mass and momentum in numerous industrial systems. As technology advances and the stress on such systems increases, the demands on the operational conditions and capabilities of rotating machinery are greatly increased. The two books which contain the Hawaii conference proceedings are purchasable separately or together in a two-volume set.
