**The Ancient Origins of Consciousness: How the Brain Created Experience (MIT Press)** Todd E. Feinberg, Jon M. Mallatt

How is consciousness created? When did it first appear on Earth, and how did it evolve? What constitutes consciousness, and which animals can be said to be sentient? In this book, Todd Feinberg and Jon Mallatt draw on recent scientific findings to answer these questions -- and to tackle the most fundamental question about the nature of consciousness: how does the material brain create subjective experience? After assembling a list of the biological and neurobiological features that seem responsible for consciousness, and considering the fossil record of evolution, Feinberg and Mallatt argue that consciousness appeared much earlier in evolutionary history than is commonly assumed. About 520 to 560 million years ago, they explain, the great "Cambrian explosion" of animal diversity produced the first complex brains, which were accompanied by the first appearance of consciousness; simple reflexive behaviors evolved into a unified inner world of subjective experiences. From this they deduce that all vertebrates are and have always been conscious -- not just humans and other mammals, but also every fish, reptile, amphibian, and bird. Considering invertebrates, they find that arthropods (including insects and probably crustaceans) and cephalopods (including the octopus) meet many of the criteria for consciousness. The obvious and conventional wisdom--shattering implication is that consciousness evolved simultaneously but independently in the first vertebrates and possibly arthropods more than half a billion years ago. Combining evolutionary, neurobiological, and philosophical approaches allows Feinberg and Mallatt to offer an original solution to the "hard problem" of consciousness.

They were enjoying reading this book. If you did not have enough space to create this book you can buy the e-book. You can m0ore easily to read this book out of your smart phone. The price is not very costly but this book offers high quality.

#### **Juli Gadberry:**

As a pupil exactly feel bored to be able to reading. If their teacher expected them to go to the library or to make summary for some e-book, they are complained. Just small students that has reading's spirit or real their interest. They just do what the professor want, like asked to the library. They go to at this time there but

nothing reading very seriously. Any students feel that examining is not important, boring and can't see colorful images on there. Yeah, it is to get complicated. Book is very important to suit your needs. As we know that on this period of time, many ways to get whatever we wish. Likewise word says, many ways to reach Chinese's country. Therefore , this The Ancient Origins of Consciousness: How the Brain Created Experience (MIT Press) can make you experience more interested to read.
