The Molecular Biology of Cancer

The Molecular Biology of Cancer

The Molecular Biology of Cancer discusses the state of progress in the molecular biology of cancer. The book describes the effects of anticancer agents on nucleolar ultrastructure; the role of chromosomes in the causation and progression of cancer and leukemia; the replication, modification, and repair of DNA. The text also describes the metabolism and utilization of messenger RNA and other high molecular weight RNA and low molecular weight nuclear RNA; the characteristics, structures, and functions of nuclear proteins; and the process of protein synthesis. Nucleotides are reviewed with regard to its biosynthesis, inhibition of synthesis, and development of resistance to inhibitors. The book further tackles the biochemical mechanisms of chemical carcinogenesis; the oncogenic viruses; and the molecular correlation concept. The text also demonstrates phenotypic variability as a manifestation of translational control; and plasmacytomas. Molecular biologists, virologists, pathologists, cell biologists, oncologists, pharmacologists, and students taking related courses will find the book useful.
