## **Mineralogy and geology of radioactive raw materials** E. William Heinrich

Although some of the older literature on radioactive minerals has been cited in this volume where it is especially pertinent, most of that dealing simply with the description of properties or with listings of occurrences has not been included because of the availability of previous reference works in this area. Throughout Part 2 the writer has attempted to present the descriptions of deposits arranged according to a genetic classification. Some deviations, however, appear and some investigators will disagree with the genetic disposition of various deposits. The writer has attempted to present equitable opposing viewpoints.
