Lasers and Holography (Dover Books Explaining Science)

Winston E. Kock

Lasers and Holography (Dover Books Explaining Science) Winston E. Kock

As the words *holo* (complete) and *gram* (message) connote, the hologram captures the entire message of a scene in all its visual properties, including the realism of three dimensions. It involves the simple process of photographically recording the pattern formed by two interfering sets of light waves, one of these sets being a reference wave. With the introduction of lasers to holography in 1963, real advances in the development of holography began to take place.

Dr. Kock's lucid introduction to lasers and holography has now been revised and updated for a second edition. It begins with a clear discussion of wave patterns and coherence. Then the development of lasers is summarized, along with the phenomenon of wave diffraction. Finally, the important subjects of zone plates and the properties of holograms are skillfully described. A new, concluding chapter brings the story up to the present, with a survey of recent advances in such areas as viewing holograms, hologram computer memories, liquid surface holography, synthetic-aperture radar and sonar, large new lasers, fiber optics, etc.

Using language that can be readily understood by high school and junior high school students, Dr. Kock has written a brief, yet authoritative volume that should satisfy anyone's curiosity about this burgeoning field. The remarkable discoveries that have already occurred are only a prelude to an even more remarkable future. 84 illustrations, including 8 new to this edition. New preface. Suggested (1981) additional reading. Index.

From reader reviews:

Stephen Stover:

In other case, little people like to read book Lasers and Holography (Dover Books Explaining Science). You can choose the best book if you want reading a book. Given that we know about how is important any book Lasers and Holography (Dover Books Explaining Science). You can add expertise and of course you can around the world by way of a book. Absolutely right, since from book you can learn everything! From your country until finally foreign or abroad you may be known. About simple thing until wonderful thing you are able to know that. In this era, we are able to open a book as well as searching by internet product. It is called e-book. You should use it when you feel bored stiff to go to the library. Let's learn.

Edna Garza:

Your reading 6th sense will not betray you, why because this Lasers and Holography (Dover Books Explaining Science) publication written by well-known writer who knows well how to make book that may be understand by anyone who have read the book. Written inside good manner for you, leaking every ideas and composing skill only for eliminate your own hunger then you still question Lasers and Holography (Dover Books Explaining Science) as good book not just by the cover but also by content. This is one guide that can break don't assess book by its deal with, so do you still needing yet another sixth sense to pick this!?! Oh come on your studying sixth sense already said so why you have to listening to an additional sixth sense.

Eric Bittinger:

It is possible to spend your free time to read this book this e-book. This Lasers and Holography (Dover Books Explaining Science) is simple to deliver you can read it in the area, in the beach, train along with soon. If you did not possess much space to bring the actual printed book, you can buy typically the e-book. It is make you simpler to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when you buy this book.

Tracy Rendon:

This Lasers and Holography (Dover Books Explaining Science) is new way for you who has attention to look for some information because it relief your hunger info. Getting deeper you into it getting knowledge more you know or else you who still having little bit of digest in reading this Lasers and Holography (Dover Books Explaining Science) can be the light food to suit your needs because the information inside that book is easy to get by means of anyone. These books create itself in the form that is certainly reachable by anyone, that's why I mean in the e-book contact form. People who think that in guide form make them feel tired even dizzy this publication is the answer. So there is absolutely no in reading a guide especially this one. You can find what you are looking for. It should be here for a person. So , don't miss the idea! Just read this e-book kind for your better life as well as knowledge.
