Running Out of Time-Introducing Behaviorology to Help Solve Global Problems

Stephen F. Ledoux

Running Out of Time-Introducing Behaviorology to Help Solve Global Problems Stephen F. Ledoux *Running Out of Time—Introducing Behaviorology to Help Solve Global Problems* is written for anyone concerned about human behavior in general, or the part it plays in solving local and global problems such as global warming, pollution, resource depletion, overpopulation and, dare we say it, human survival. For several decades, concerned people around the world, including traditional natural scientists such as physicists, chemists and biologists have worked to improve and expand solutions to serious and growing global problems. This has led them to point out that both problems and solutions to these issues involve a large component of human behavior. Scientists are now realizing that making significant changes to human behavior, at all levels of society, to help solve such problems, requires that the natural science of human behavior—Behaviorology—be understood and applied to make truly lasting improvements.
Understand the most crucial aspects of Behaviorology:

• Its historical foundations.

• Its principles, methods, concepts, and practices.

• Its basic answers to some of humanity's long–standing questions about topics as diverse, yet interrelated, as, values, rights, ethics, morals, language, consciousness, personhood, life, death and reality.

• Its interconnections with other natural sciences, interconnections that both support our understanding of ordinary, everyday human behavior, and help solve global problems.

What professionals are saying about Stephen Ledoux's *Running Out of Time*
Clearly the Great Work of understanding human behavior underlies most of the other Great Works of our time. What importance may be placed on our behavior, as a people, as we deal with climate change, the availability of fresh water, appropriate health care, or wars? Behaviorology, as a natural science, offers us hope and new approaches to understand current and historical questions about behavior. Dr. Ledoux's clear prose, illustrative examples, and poignant storytelling make this book's message accessible to many levels of readers as well as useful to those of us seeking new understanding and the opportunity to make a difference.

Dr. William Trumble, Ph.D. Biologist, Professor, University of New Hampshire

Behaviorology helps us succeed in endeavors from training a dog to sit on cue to getting humans to recycle and live sustainably. By familiarizing ourselves with this science, we are not only better able to engage in effective and efficient animal training projects, we are also in a position to help create a better world for both us and our animal friends.
