Biometeorology: Proceedings of the Second International Bioclimatological Congress Held at the Royal Society of Medicine, London, 4-10 Sept. 1960, Organized ... The International Society of Biometeorology

Biometeorology is based on the proceedings of the Second International Bioclimatological Congress, held at The Royal Society of Medicine, London in September 1960. This book is a collection of selected reports from participating members of The International Society of Biometeorology. The compendium covers a wide range of issues related to the study of the direct and indirect interrelations between the geophysical and geochemical factors of the atmospheric environment and living organisms: plants, animals, and human. The book is divided into four main sections; themes are selected for the congress. The first theme covers topics on high altitude bioclimatology such as the physiological aspects of life at extreme altitudes. The second theme is about tropical bioclimatology or aspects of plant and animal life in tropical climates. The third deals with bioclimatological classifications, which is about the relations between the climate and the distribution of the living species on the Earth. The fourth theme, meteoropathological forecasting, discusses the consequences of anticipated meteorological conditions and weather types on living organisms. The text will be of use to biologists, health professionals, zoologists, botanists, agriculturists, sociologists, meteorologists, and ecologists.
