Programming Web Graphics with Perl and GNU Softwar

Shawn P. Wallace

Programming Web Graphics with Perl and GNU Softwar Shawn P. Wallace

From access counters and log-report graphs to scientific plots and on-the-fly animated GIFs, graphics scripting is within the grasp of most Web authors. It is a little documented field, however, and the many valuable free libraries and tools available on the Internet remain under-utilized. *Programming Web Graphics with Perl & GNU Software* is aimed at intermediate and advanced Web users who want to use CGI scripts to generate dynamic graphic content. It will also help to demystify the manipulation of graphics formats for newcomers to the Web. *Programming Web Graphics with Perl & GNU Software* takes a practical, resource-like approach to the content. It is not a book about design or aesthetics of Web graphics; its focus is on programming or, more accurately, scripting programs that manipulate graphics file to be published on the Web. Most of the examples in the book use Perl as a scripting language, though the concepts are applicable to any programming language. However, several powerful Perl modules for generating graphics (GD, PerlMagick, GIFgraph) should help position Perl as a major contender for your Web graphics applications. Most of the topics covered in the book are applicable to any platform (NT, Linux, Un*x, MacOS), with the exception of the chapter detailing the Gnu Image Manipulation Program (a free Adobe Photoshop-like application), which requires a connection to an X server. The focus is always on free software, when it is available. This book covers the following:

- a tour through the most popular Web graphics file formats by implementing parsers for GIF, JPEG, and PNG files
- descriptions of the PNG, JPEG, and giflib libraries, as well as many other free and proprietary libraries and SDKs
- extensive documentation and examples using the Perl graphics modules GD and GIFgraph, and the Perl interface to the powerful ImageMagick libraries
- documentation on the Gnu Image Manipulation Program (GIMP) and the Perl interface that lets you easily script plug-ins or interface to the GIMP via the Web
- the creation of image maps from data extracted from a database
- the implementation of several new Perl modules for the creation of neatly formatted PostScript files
- details on interfacing to a fax gateway
- reusable recipes for many popular applications such as Web counters and Web cams
- the creation of animated GIFs on-the-fly

One of the key ingredients to the success of the Web is that anyone who wanted to could participate in publishing to the world. This book will take its readers to the next level of publishing to the world: learning to use scripting programs to create dynamic graphics for their Web sited. The information in this book is written in a practical, easy manner with high-quality documentation and useful examples throughout. It is a detailed reference that provides Web designers and programmers and with the information they need to program.

From reader reviews:

Danny Exum:

Book is definitely written, printed, or highlighted for everything. You can recognize everything you want by an e-book. Book has a different type. As you may know that book is important to bring us around the world. Next to that you can your reading ability was fluently. A publication Programming Web Graphics with Perl and GNU Softwar will make you to end up being smarter. You can feel more confidence if you can know about every little thing. But some of you think which open or reading some sort of book make you bored. It is not necessarily make you fun. Why they might be thought like that? Have you in search of best book or suited book with you?

Gayle Skinner:

Reading a reserve can be one of a lot of action that everyone in the world adores. Do you like reading book and so. There are a lot of reasons why people love it. First reading an e-book will give you a lot of new info. When you read a guide you will get new information simply because book is one of various ways to share the information as well as their idea. Second, studying a book will make an individual more imaginative. When you looking at a book especially fictional works book the author will bring you to imagine the story how the characters do it anything. Third, it is possible to share your knowledge to other individuals. When you read this Programming Web Graphics with Perl and GNU Softwar, you could tells your family, friends as well as soon about yours book. Your knowledge can inspire average, make them reading a book.

Hubert Wooten:

A lot of people always spent their own free time to vacation as well as go to the outside with them family members or their friend. Are you aware? Many a lot of people spent that they free time just watching TV, as well as playing video games all day long. If you want to try to find a new activity here is look different you can read a new book. It is really fun to suit your needs. If you enjoy the book that you just read you can spent all day every day to reading a reserve. The book Programming Web Graphics with Perl and GNU Softwar it doesn't matter what good to read. There are a lot of individuals who recommended this book. We were holding enjoying reading this book. When you did not have enough space to develop this book you can buy the actual e-book. You can more easily to read this book from the smart phone. The price is not to fund but this book provides high quality.

Rachel Morris:

Reading a reserve make you to get more knowledge from it. You can take knowledge and information from the book. Book is written or printed or descriptive from each source which filled update of news. Within this modern era like at this point, many ways to get information are available for a person. From media social like newspaper, magazines, science publication, encyclopedia, reference book, new and comic. You can add your understanding by that book. Do you want to spend your spare time to open your book? Or just searching for

the Programming Web Graphics with Perl and GNU Softwar when you essential it?
