Differential and Riemannian Manifolds (Graduate Texts in Mathematics) Serge Lang

This is the third version of a book on differential manifolds. The first version appeared in 1962, and was written at the very beginning of a period of great expansion of the subject. At the time, I found no satisfactory book for the foundations of the subject, for multiple reasons. I expanded the book in 1971, and I expand it still further today. Specifically, I have added three chapters on Riemannian and pseudo Riemannian geometry, that is, covariant derivatives, curvature, and some applications up to the Hopf-Rinow and Hadamard-Cartan theorems, as well as some calculus of variations and applications to volume forms. I have rewritten the sections on sprays, and I have given more examples of the use of Stokes' theorem. I have also given many more references to the literature, all of this to broaden the perspective of the book, which I hope can be used among things for a general course leading into many directions. The present book still meets the old needs, but fulfills new ones. At the most basic level, the book gives an introduction to the basic concepts which are used in differential topology, differential geometry, and differential equations. In differential topology, one studies for instance homotopy classes of maps and the possibility of finding suitable differentiable maps in them (immersions, embeddings, isomorphisms, etc.).

From reader reviews:

Doris Edwards:

The book Differential and Riemannian Manifolds (Graduate Texts in Mathematics) give you a sense of feeling enjoy for your spare time. You may use to make your capable a lot more increase. Book can to become your best friend when you getting anxiety or having big problem along with your subject. If you can make looking at a book Differential and Riemannian Manifolds (Graduate Texts in Mathematics) for being your habit, you can get more advantages, like add your capable, increase your knowledge about some or all subjects. You can know everything if you like open and read a guide Differential and Riemannian Manifolds (Graduate Texts in Mathematics). Kinds of book are several. It means that, science guide or encyclopedia or others. So , how do you think about this book?

David Sweet:

Do you have something that you want such as book? The book lovers usually prefer to select book like comic, brief story and the biggest an example may be novel. Now, why not seeking Differential and Riemannian Manifolds (Graduate Texts in Mathematics) that give your satisfaction preference will be satisfied by reading this book. Reading behavior all over the world can be said as the way for people to know world better then how they react towards the world. It can't be mentioned constantly that reading routine only for the geeky man or woman but for all of you who wants to be success person. So , for every you who want to start looking at as your good habit, you may pick Differential and Riemannian Manifolds (Graduate Texts in Mathematics) become your own personal starter.

Steven Barraza:

Is it you who having spare time subsequently spend it whole day through watching television programs or just lying down on the bed? Do you need something new? This Differential and Riemannian Manifolds (Graduate Texts in Mathematics) can be the respond to, oh how comes? A book you know. You are therefore out of date, spending your time by reading in this fresh era is common not a nerd activity. So what these textbooks have than the others?

John Lambeth:

What is your hobby? Have you heard this question when you got learners? We believe that that query was given by teacher to the students. Many kinds of hobby, Every individual has different hobby. And also you know that little person similar to reading or as reading through become their hobby. You should know that reading is very important and book as to be the thing. Book is important thing to add you knowledge, except your own teacher or lecturer. You get good news or update about something by book. A substantial number of sorts of books that can you take to be your object. One of them is actually Differential and Riemannian Manifolds (Graduate Texts in Mathematics).
